

ABSTRACT OF THE DISCLOSURE

A system for facilitating interaction with an insurance service includes a processor unit for executing program instructions, a memory for storing the program instructions, and a communication interface for interacting with a user. The system further includes interface logic for providing a graphical interface presentation to the user concerning the insurance service, including at least one of: (a) a first dashboard display for presenting overview information with respect to the renewal of at least one insurance policy; (b) a second dashboard display for presenting overview information with respect to the processing of at least one automatic agreement; (c) a third dashboard display for presenting overview information with respect to the processing of at least one insurance claim; and (d) a fourth dashboard display for presenting executive-level overview information compiled from information presented in the first, second and third dashboard displays. In an exemplary embodiment, the insurance service pertains to a reinsurance service.
